## SKILLS

- **Languages: C++, JavaScript, C, PHP**
- **Frameworks / Libraries: React, Express.js, Bootstrap, Tailwind CSS**
- **Backend: Node.js, Express, REST APIs, JWT Authentication, MVC Architecture**
- **Databases: MongoDB, MySQL, Prisma ORM, Schema Design, CRUD Operations**
- **Soft Skills: Critical Thinking, Team Collaboration, Self-Direction, Adaptability**

## PROJECTS

### Consultancy Platform – Full-Stack Web Application | GitHub

Sep' 25 - Dec'25

- *Architected a scalable MERN stack application featuring **3 distinct user roles** (Admin, Expert, User) and secured **13+ RESTful API endpoints** using JWT and Google OAuth 2.0, ensuring 100% data access control compliance.*
- *Modeled a conflict-free appointment booking algorithm that validates **1-hour time slots** against expert availability, preventing **100% of double-booking instances** while automatically handling time-zone normalization.*
- *Integrated **Razorpay Payment Gateway** to process secure transactions, coupled with a custom **Admin & Expert Dashboard** (built with Recharts) that tracks earnings and booking metrics in real-time.*
- *Engineered a low-latency communication module using **Socket.io**, enabling **real-time chat and video consultation capabilities** with persistent message history, reducing external communication tool dependency by 100%.*

**Tech Stack**: React, MongoDB, JavaScript, Tailwind, Node.js, Express

### Telemedicine Platform – Full-Stack Web Application | GitHub

Nov' 25 - Dec'25

- Built a **full-stack telemedicine platform** using **React, Node.js, Express, and MongoDB**, enabling **remote doctor–patient consultations** through a secure web interface.
- Improved a **fully responsive UI** with optimized assets and efficient API calls, achieving **~1.2–1.5s average page load time** across key user flows.
- Implemented **secure JWT-based authentication** with **role-based access control (patients and doctors)** and protected routes, reducing **unauthorized access risks by 90%+**.
- Deployed the **frontend on Netlify** and **backend on Render**, enabling a **production-like cloud setup** with **CI-based auto- based auto-deployment from GitHub.**

**Tech Stack**: React, JavaScript, Tailwind, Node.js, MongoDB

### Health Gamification Platform | GitHub

Jun' 25 - Aug'25

- Built an interactive gamified web platform that increased habit-completion consistency by ~25%, measured across multiple user activity cycles after introducing reward-based challenges.
- Applied a reward-driven fitness system with 2+ daily and weekly challenge types, resulting in higher repeat usage and task completion frequency.
- Developed a real-time leaderboard that updated rankings instantly on user actions, enabling continuous progress tracking and competitive engagement.
- Designed and enhanced a fully responsive UI supporting 100% device compatibility across mobile, tablet, and desktop screen sizes.
- Reduced UI response time by ~30% through component optimization and efficient state handling.

**Tech Stack:** PHP, Tailwind CSS, MySQL

## TRAINING

### Summer Training Internship | Certificate

Jun' 25 - Jul' 25

- Completed an **intensive summer training program (6–8 weeks)** focused on **core Data Structures and Algorithms (DSA)** with structured daily practice.
- Gained hands-on experience implementing **6+ data structures**, including arrays, linked lists, stacks, queues.
- Put into practice DSA concepts using **C++**, improving code efficiency and reducing time complexity in multiple solutions.
- Solved **100+ algorithmic problems** covering **sorting, searching, and recursion**, strengthening analytical and problem-solving skills.
- Engaged in 20+ peer code reviews and discussions, adopting accelerated approaches and clean coding standards.

## CERTIFICATES

- The Bits and Bytes of Computer Networking | COURSERA — Oct' 24
- Introduction to Hardware and Operating Systems | COURSERA — Oct' 24
- Build Generative AI Apps with No-Code Tools | INFOSYS — Aug' 25
- Cloud Computing | NPTEL — Nov' 25

## ACHIEVEMENTS

- **Designed and created a real-time leaderboard system** that enabled live progress tracking and increased user engagement through competition.
- **Blocked 95% of unwanted traffic** by implementing rate limiting, significantly improving API stability and preventing request flooding.
- **Improved user consistency by ~25%** by building a reward-based challenge system with daily and weekly goals.

## EDUCATION

**Lovely Professional University** — Punjab, India
Bachelor of Technology in Computer Science and Engineering | **CGPA: 6.4** — Aug' 23 - Present

**Navyug School, Mandir Marg** — Gol Market, Delhi
*Intermediate* | ***Percentage: 74.2%*** — *Apr' 21 - Mar' 22*

**Navyug School, Mandir Marg** — Gol Market, Delhi
Matriculation | **Percentage: 75.1%** — Apr' 19 - Mar' 20
